Conometric Concept: a new vision of implant prosthetics

25-26th January 2016

Degidi Dental Clinic – Bologna, Italy
The Ankylos® Implant System has features that make it unique: intrinsic platform switching, an integral part of the original implant design; the conical connection, virtually without microgap; the square thread and the distinctive implant body design. With a full understanding and correct use of these, clinicians can achieve truly exceptional results that are equally beneficial for dentist and patient alike.

The main focus of this course will be the Conometric Concept, which, is a new vision of implant surgery and prosthetics based on the One Abutment One Time Concept, the use of the Standard abutment and, above all, the use of the new Conometric Copings (designed by Dr Degidi) to create fixed, telescopically retained, single or multiple restorations, immediate or delayed, acrylic, monolithic or ceramic made. These outstanding restorations are extremely precise, cement-less, easy-to-make, biologically driven and cost-effective: they really represent the new standard in implant prosthetics.

Course participants will acquire all that they need to achieve these remarkable results through theory presentations, practical work, and by observing live procedures carried out by the Course Director.
The Ankylos® Implant System with single elements:

- Surgical tips and tricks
- Healed sites and extraction sites
- Parameters that affect primary stability
- *One Abutment Once* Concept
- *One Abutment Fits All* Concept
- Chamber Concept: Guidelines
- Importance of biotype and how to modify it
- Buccal plate management
- Treating sites with compromised buccal plate
- Temporary and final conometric crowns: hot to select the appropriate restorative material

- *Hands-on*: the Chamber Concept

  Learn the following:

  - How to select the appropriate abutment
  - How to select the appropriate conometric abutment
  - How to use dedicated instruments to correctly pack biomaterial in the peri-implant gaps

- *Video or live surgery*: immediate implantation and restoration for a single compromised tooth
The Ankylos® Implant System and the Conometric Concept:

- How to make a fixed restoration using the Conometric Concept (CC)
- Advantages of conometric retained restorations: simplicity, precision, retrievability, maintenance, cost
- Limits of cemented and screw-retained restorations
- Conometric restorations with immediate loading
- Conometric restorations in staged loading approach
- Acrylic/composite conometric restorations
- Ceramic/zirconia/disilicate conometric restorations
- Dedicated conometric components for standard abutments
- Dedicated conometric components for Syncone abutments
- The CC and single implant restorations
- The CC and multiple implant restoration (partial or fully edentulous)

- Hands-on:
  - Achieve the appropriate engagements with conometric abutments;
  - Achieve appropriate parallelism with multiple divergent implants
  - Learn how to passivate a definitive conometric zirconia bridge
Registration form

Please complete the form with block letters, and then send the form and a copy of the bank transfer document to the at the following fax number 0039 051 541514 or by the email: info@degidi.it
